

PROJECT 7

Task Breakdown

While we collaborated together on all parts of this project, we will list the parts below that one member of the group did the majority of the work on.

Morgan

- UI prototype
- Starting code for memeCreate.js
- styles.css
- Server NodeJS files
- MySQL database

Ben

- Client-side functionality
 - memeCreate.js
 - memeGrid.js
 - memeList.js
 - memeCard.js
 - App.js
- @material-ui formatting

Ben's Personal Statement

I always enjoy working with Morgan and have had a tough yet fun time on this project. We split the workload as even as possible, but there was lots of overlap on the portions of the project we worked on. She has been the greatest teammate I could have asked for and hope I can work with her potentially in the future during a project in 383.

Morgan's Personal Statement

I thoroughly enjoyed working with Ben on this project. While I established the UI prototype and started on some of the functionality, Ben mainly coded the other components. To balance the workload, I worked on creating the server and database to connect to the client. I feel that we balanced the requirements well and I hope I have the opportunity to work with Ben again in the future.

Group Evaluation

The group has divided the work even and is a cohesive unit. The concept for the project was fun and creative which made the coding and debugging process bearable and rewarding. The group hopes to work together again in the future as everyone is efficient and hardworking.
