

# PROJECT 5

## **Task Breakdown**

While we collaborated together on all parts of this project, we will list the parts below that one member of the group did the majority of the work on.

*Morgan*

- DataGraph.js
- Main CSS Elements

*Ben*

- DataInput.js
- DataList.js

## **Ben's Personal Statement**

On the project I mainly worked on the DataInput.js and DataList.js files. Morgan and I collaborated heavily on the entire project as a whole, and crafted a developmental plan of what we wanted the project to look like before we wrote our first line of code. She is a wonderful student and partner and I am lucky to have such a hard-working group member.

## **Morgan's Personal Statement**

I mainly worked on the DataGraph.js and was in charge of all of the CSS styling and formatting. Ben and I worked together to lay down the foundations of what the UI should look like, what type of data we would collect, and what our code would roughly look like. He was great to work with, and while we often have the same logic of thinking, he also showed me new ways to approach things which made me grateful to have him as my team member.

## **Group Evaluation**

This group is highly efficient and hardworking, while still keeping things light and entertaining. This project was truly a team effort and our group looks forward to working together on the next project.
